Personal Profile

Last summer, I completed a 12-week Software Boot Camp with Just IT. Modules/tech Stack covered include understanding SDLC and software methodologies, how to develop a web-based product, database design, HTML, Python, JavaScript and CSS. Since completing the Boot Camp, I have been regularly completing coding challenges on Codewars to sharpen my problem-solving skills and have now added it to my list of hobbies! Additionally, I have been building small-scale web applications that have consolidated my understanding of the languages I've learnt on the Boot Camp but now with the focus on learning how to utilise JavaScript's library, React. I'm a full member of Codecademy, another invaluable tool that has aided my quest for further knowledge. I have also been paying attention to open-source projects on GitHub, gaining knowledge in collaboration, version control, and real-world project exposure. I also own a few Raspberry Pis, building a multitude of projects, and I'm comfortable around Unix-based systems.

Past: A highly skilled and experienced Ceiling Fixer and Dry liner (supervisor) with over 20 years in the industry. My hands-on experience has honed my ability to troubleshoot on-site challenges, adapt to changing project demands, and maintain a safe, organised work environment. Working within a team environment as well as having the ability to work using my initiative. Known for my strong work ethic and dedication to craftsmanship, I am committed to exceeding client expectations and contributing to the successful completion of each project.

Future: Looking ahead, I am eager to start a career in software, and I'm looking for a junior position which can develop my knowledge and experience. I've been enjoying learning JavaScript and would love to leverage this new-found passion and knowledge to land me a role as a JavaScript developer.

Key Skills

- HTML, JavaScript, CSS, React, Tailwind,
- Git version control
- Linux
- Raspberry Pi
- Regex Proficiency
- Problem-solving
- Building positive relationships
- Leadership
- Active Listener
- Team player
- Software Skills: Effectively troubleshoot and resolve software issues

Projects

Weather App:

Originally developed as a Tkinter app, I returned to this project to branch off and create a Flask version to host it on my portfolio, with added Bootstrap for enhanced styling. The application integrates an external weather API to fetch real-time weather data, displaying current conditions and forecasts. It features an intuitive design, allowing users to easily search for and receive weather updates by city. This project enhanced my skills in API integration, GUI development, and Python programming.

Rock Paper Scissors Game:

Built a Rock Paper Scissors game using JavaScript, featuring an auto-play function for automated gameplay. Implemented local storage to save and track user scores across sessions. The app includes a user-friendly interface and responsive design, providing an engaging and seamless gaming experience. This project strengthened my JavaScript skills, particularly in DOM manipulation, local storage management, and interactive feature development.

Todo-list:

The application, built using JavaScript, dynamically generates and updates tasks as HTML elements. Users can easily add, edit, and delete tasks, directly reflecting the changes on the webpage. This project improved my ability to manipulate the DOM and manage user interactions using JavaScript while also enhancing the overall user experience with Bootstrap's responsive design.

Jobs Website:

I'm currently building a jobs website using React, which has taught me key fundamentals like component-based architecture, state management, and will soon implement the handling of API requests. The project involves creating a responsive interface where users can search and filter job listings, helping me gain hands-on experience with React hooks and functional components. This project has significantly deepened my understanding of React and how it can be used to build dynamic web applications.

Education and IT Training

2024 Level 3 qualification:	Just IT Training Ltd, London Digital Skills Bootcamp: Software Development A twelve-week intensive bootcamp covering the fundamentals of Web and Software development.
2025 Certificate of completion	Codecademy Learn the Command Line
2025 Certificate of completion	Codecademy Learn Git: Introduction
2024 Certificate of completion	Codecademy Learn the basics of HTML
2024 Certificate of completion	Codecademy Learn CSS
2024 Certificate of completion	Codecademy Learn the Basics of Regular Expressions Course

2024
Certificate of completion

Codecademy
Learn JavaScript course

2023-2024
NCFE:
NCFE Level 2 Certification in Understanding coding

Bridgwater & Taunton College

2023
NVQ:
NVQ Diploma Level 2 Passive Fire Protection (Construction)

The Skills Centre

2022
NVQ:
NVQ Diploma Level 3 Occupational Work Supervision (Construction)

The Skills Centre

2005
NVQ:
NVQ Diploma Level 2 Dry liner – Fixer (Construction)

The Skills Centre

1997-2001
GCSE:

- GCSE Maths C
- GCSE German C

Woodlands School, Basildon

Employment History

2001-2024
Self-Employed Ceiling Fixer

In this role for many years, I have learned to coordinate multiple projects simultaneously and know the importance of coordinating with other trades to avoid delays. Listening to clients' needs and ensuring their expectations were met throughout a project, would help solidify healthy relations. A client expressing concerns about noise disruption during business hours is a recurring theme I experienced throughout. I would work closely with them to adjust my schedule, completing the most disruptive tasks out of hours. We often encountered unexpected challenges on the job, such as last-minute design changes or unforeseen structural issues that would sometimes require a complete revision of our initial plans. We would collaborate with other trades to implement the new design without delaying the overall project interests.

Interests

- Chess
- Reading
- Raspberry Pi
- Playing guitar
- Learning new skills
